

MI100 Series

KEY FEATURES

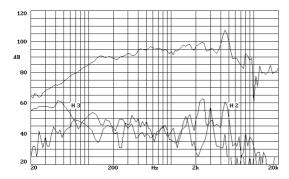

- High power handling (250 W_{AES})
- Low harmonic distortion
- Controlled dispersion up to 3 kHz
- 2" edgewound aluminium voice coil with polyimide fiber glass former
- Designed for high quality mid-frequency reproduction

GENERAL DESCRIPTION

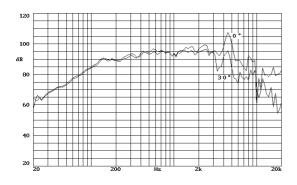

This low-mid frequency transducer offers three main points of interest: a good sensitivity (97 dB), a controlled dispersion up to 3 kHz and a low harmonic distortion. These characteristics make it suitable for high quality sound reinforcement systems, especially for live applications. Furthermore, it is mounted with a cast aluminium basket that reduces mechanical vibrations and increases thermal dissipation. This fact, added to the use of a high quality 2" voice-coil, increases considerably the power handling reaching 250 W_{AES}.

FREQUENCY RESPONSE AND DISTORTION CURVES

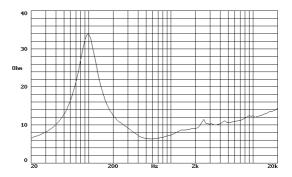

Note: on axis frequency response measured with loudspeaker standing on infinite baffle in anechoic chamber, 1w @ 1m.

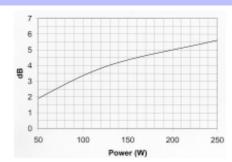

FREQUENCY RESPONSE OUT OF AXIS

FREE AIR IMPEDANCE CURVE

POWER COMPRESSION LOSSES

Note: These losses are calculated from a five minutes AES power test applying band limited pink noise (120-3500 Hz). The loudspeaker is free-air standing.

MATERIALS

- Voice coil: edgewound aluminium wire with high temperature bonding strength. Polyimide fiber glass former able to withstand high temperatures.
- Cone: light and stiff paper cone to provide good midfrequency response.
- Surround: foam.
- **Spider:** cotton spider.
- **Metal parts:** effective protection against corrosion.
- **Basket:** specially designed die cast aluminium basket to avoid disturbing resonances.
- Magnet: high Curie temperature ferrite.

Notes:

*The power capacity is determined according to AES2-1984 (r2003) standard. Program power is defined as the transducer's ability to handle normal music program material.

**T-S parameters are measured after an exercise period using a preconditioning power test.

The measurements are carried out with a velocity-current laser transducer and will reflect the long term parameters (once the loudspeaker has been working for a short period of time).
